Report also identified German Patent Nos. DE 290 50 54 and DE 199 23 964. These two German patents are not included in this Supplemental Information Disclosure Statement as they were included with the previously submitted Information Disclosure Statement filed on June 28, 2001.

The relevance of DE 198 16 054 is that it shows a camera device for an automobile with three backwards-directed cameras. The cameras are not arranged to view the area directly behind or beside the rear end of the car.

The relevance of DE 36 24 4 86 is that it discloses a camera device for a forklift truck with cameras directed to the load part of the truck.

The relevance of DE 199 25 131 is that it discloses a forklift truck with one single camera at the rear end, the camera being turned according to the steering direction of the truck.

The relevance of EP 0 949 189 is that it shows a forklift truck with two backwards-directed cameras. A monitor is arranged in the cabin in front of the driver. An alternative for this is to display the image in the front screen of the cabin.

Pursuant to 37 C.F.R. §1.97(b)(3), no fee is believed to be due for the submission of this Supplemental Information Disclosure Statement, as it is being submitted before the mailing date of a first Office Action on the merits.
